Dear Hiring Manager,

I am applying for the Data Engineer role at Falck with 7 years of data engineering experience in logistics and retail. Falck operates more than 3,000 ambulances in 11 countries; I value reliable data at that scale.

- **Scale**: own a shipment-events pipeline processing 40 million events daily with Kafka, Apache Airflow, PostgreSQL and BigQuery.
- **Efficiency**: cut a nightly rebuild from 6 hours to 55 minutes using incremental dbt models.
- **Quality**: introduced Great Expectations tests on 30 tables; failed loads dropped 70% in the first quarter.

Python, SQL and BigQuery provide my foundation for learning Azure, Databricks, PySpark and Azure Data Factory, all gaps. AI solutions are also a gap; ingestion is my adjacent contribution. I welcome learning from senior engineers.

Logistics work with planners and five producing teams bridges gaps in Business Analysts and business operations; my Utrecht and Copenhagen roles do not establish time zones experience. For gaps in data modeling, CI/CD and troubleshooting, I bring a star schema, GitHub Actions and Terraform deployments, and Airflow alerts. Performance issues remain a gap in my experience; my adjacent experience is cutting a nightly rebuild from 6 hours to 55 minutes with incremental dbt models. Unit tests remain a gap; I bring Great Expectations and dbt tests. I lack experience with code reviews as required; I reviewed 40 analyst dbt models. I lack experience with technical documentation as required; I wrote a runbook and a migration guide used by four teams. Reusable frameworks remain a gap; my open-source dbt package is adjacent. GDPR and HIPAA remain gaps. I lack experience handling sensitive operational data; data contracts and quality rules provide adjacent experience.

Based in Copenhagen with EU work authorisation without sponsorship, I can start no earlier than 1 February 2027 after three months' notice. I welcome a discussion.

Yours sincerely,

Alex Fernsby
