Dear Hiring Manager,

I am applying for the Data Engineer role at Flatpay because it centres on the work I have done for seven years: owning a data pipeline and its data models, and testing both so other teams can rely on them.

- **Ownership**: I run a data pipeline carrying 40 million Kafka events a day into PostgreSQL and BigQuery, orchestrated with Apache Airflow; I cut its BigQuery bill by 35% with partitioning and clustering.
- **Modeling**: incremental dbt models cut our nightly rebuild from 6 hours to 55 minutes, and I designed a star schema used by 12 analysts.
- **Quality**: Great Expectations tests on 30 core tables reduced failed loads by 70% in the first quarter. GitHub Actions and Terraform cut environment setup from two days to 20 minutes.
- **Operations**: I wrote the shipment-events pipeline's on-call runbook and added alerts on 45 Airflow jobs so late partner feeds are noticed within 15 minutes.

My cloud infrastructure experience is on Google Cloud, with BigQuery, dbt and Airflow. Databricks, Prefect, Azure Data Factory, AWS, Azure and observability platforms are gaps; I would bring tested pipelines and a habit of learning tools on the job.

I bring seven years of experience, and with it mentoring and collaboration. I mentor two junior engineers patiently, lead our weekly data-modelling review and have trained 12 analysts on dbt. My English is C1.

I live in Copenhagen and can consider Herlev within a commute of one hour each way, up to four days on site per week. I am a Dutch citizen, need no sponsorship, and hold no security clearance. With three months' notice, my earliest start is 2027-02-01.

I would be glad to talk about how I can help Flatpay build its data platform.

Best regards,

Alex Fernsby
