Dear Hiring Manager,

I am applying for the Senior Data Engineer role at Too Good To Go. Owning the data pipelines behind logistics operations is the work I do today at Tidewater Logistics, and it is the work I want to keep doing.

- **Logistics data**: At Tidewater Logistics, I own the shipment-events pipeline, 40 million events per day from Kafka into a PostgreSQL and BigQuery warehouse with Apache Airflow, and cut the delivery-performance mart rebuild from 6 hours to 55 minutes with incremental dbt models.
- **Operations self-service**: I built a Looker explore so logistics planners answer delivery-delay questions themselves instead of filing tickets.
- **Shipment data**: I defined the pipeline's data contract with five producing teams and wrote its on-call runbook.
- **Data quality**: Great Expectations tests on 30 core tables made failed loads drop by 70 percent in a quarter.

Redshift is the one preferred item I have not used in production. My warehouse work is on Google BigQuery, which I support on a migration from on-premise PostgreSQL, and I cut its events-warehouse cost by 35 percent through partitioning and clustering. GitOps, CI/CD, DataOps and stakeholder management are also gaps. There, my adjacent work rests on GitHub Actions and Terraform deployments and the five-team data contract above.

I am based in Copenhagen, the city of the role, and can work four days a week at the office. After three months' notice, I can start on 1 February 2027.

I would be glad to discuss how my logistics pipeline experience could contribute to the Parcels domain.

Yours sincerely,

Alex Fernsby
